

Warranty Offerings

GE Silicones Construction Products

Project specific warranties are available for GE Silicones construction products. Warranty requirements should be reviewed with a GE Silicones representative prior to project initiation since some warranties require a drawing review, field testing and/or GE laboratory testing.

Standard Material Warranty

The Standard Material is available for most GE Silicones Construction Products. This warranty is available for new and remedial projects. No proof of adhesion testing is required, however self-performed adhesion testing prior to the start of the project is recommended.

Limited Weatherseal Warranty

Weatherseal Warranty is available for all GE SilPruf, UltraGlaze, SilShield, UltraSpan, RapidStrength and SCS1200 sealants. To obtain this warranty, testing is required to be performed on production samples. This warranty is available for new and remedial projects.

Limited Structural Adhesion Warranty

This warranty is available for all GE UltraGlaze*, SilPruf SCS2000 and SCS1200 sealants. Structural Adhesion Limited Warranties will not be issued unless a GE Technical Representative has reviewed shop drawings and GE laboratory adhesion and compatibility testing is performed on production samples of metal, glass, gaskets, spacers and setting blocks with type and manufacturer identified. Review and testing is done on a project-by-project basis. No blanket approval is given for structural glazing applications.

Sample warranties are available for each warranty type. Final warranties will not be issued prior to 30 days of substantial project completion.

Warranty Requirements

	Drawing Review	Field Adhesion Testing	GE Laboratory Testing
Structural Glazing Warranty GE UltraGlaze* Sealants GE SCS2000 SilPruf* Sealant GE SCS1200 Construction Sealant	Yes	Yes	Yes
